

Testimonial

I have a long haired Dachshund named Mikey who is now 16 years of age (as of Dec.2006), and doing very well. Five years ago, he had a Myelogram of his neck and has some problems in his disc in that area. It was recommended that he see Dr. Rose DiLeva, at the Animal Wellness Center in Chadds Ford, Pa. for **Acupuncture**. Over the years, Dr. DiLeva has also treated Mikey with **VOM** (veterinary orthopedic manipulation) and **MFR** (Myofacial Release). We have watched the progress of Mikey over the years and he is doing well because of keeping up with these Manipulations.

Mikey goes for a 20 minute to half hour walk every day. He was starting to stumble and this has almost completely stopped. Again, it has been imperative to his health to receive this treatment at least once a month. Dr. DiLeva keeps a close eye on Mikey and if he needs more treatments because of the stumbling or colder weather, then he goes more often. This is a lot better then putting him through any surgery. If you see Mikey, you would never guess his age to be 16.
