

Animal Wellness Center Now Has Ozone Therapy for your Pets!

By Rose DiLeva VMD, MS, CVCP, CVA

No one could survive without oxygen to breathe and without your cells getting the oxygen they need to exist. All humans and animals require oxygen to exist and survive. Insufficient oxygen in the body is the cause of ALL disease. All chronic pain and disease are caused by a lack of oxygen at the cellular level. The link between insufficient oxygen and disease has been firmly established. It follows, therefore, that providing a therapy that encourages oxygen utilization will benefit those diseased pets. Ozone therapy does just that.

Ozone therapy has been around about 100 years. It has only recently become a therapy in veterinary medicine. It is, in fact, on the cutting edge of veterinary medicine. I am extremely excited to announce that this cutting-edge treatment is now available to your pets at my Animal Wellness Center in Chadds Ford, Pa. 610-558-1616.

Ozone therapy can benefit EVERY medical condition your pet may have. That's a pretty amazing statement. Ozone stimulates and stabilizes all biological functions, rather than suppressing them. It gives the immune system a jump start.

Ozone therapy involves the administration of medical-grade ozone to your pet to increase the amount of oxygen in the body. This allows the body to utilize oxygen more efficiently and heal itself. This is what bodies are meant to do. I have said for years that if you give a body, be it human or animal, what it needs, it will heal itself. Ozone therapy makes this happen on a cellular level.

Ozone strengthens the immune system and improves immune response. Ozone destroys bacteria, viruses, fungi and protozoa that cause infections. Ozone therapy will improve your pet's circulation and oxygen supply which helps speed recovery. This can be particularly useful in pets that have been burned, have sunburn, degloving injuries or wounds of any kind. Ozone therapy reduces the number of free radicals in the body and increases the antioxidant system's capacity. Ozone therapy will help most all medical conditions your pet may have. Better yet, it is completely safe and non-toxic.

There are different kinds of administration methods of ozone therapy and that is determined by what condition for which your pet is being treated. Major Autohemotherapy, for example, involves taking a small amount of blood from your pet and infusing it with ozone gas. After a particular mixing method this treated ozonated blood is re-introduced into your pet through an intravenous catheter. The entire process may take 35-45 minutes. Ozone therapy potentiates all other treatments. For example, any dog or cat receiving acupuncture for osteoarthritis, intervertebral disc disease or even paralysis (as often happens with dachshunds who herniate or rupture a disc), will benefit from ozone therapy. I have included ozone therapies as a part of my cancer treatment. Every dental cleaning is finished by rinsing the oral cavity with ozonated saline to kill any remaining bacteria in the mouth. It has also been used as a therapy for Lyme Disease in both humans and pets. Ozone therapy can benefit and potentiate treatment for allergies, kidney disease, liver disease, skin problems, bone and joint problems such as hip dysplasia, cardiac issues, autoimmune conditions and cancer.

Ozonated saline can be utilized to flush infected eyes or open wounds. Ear insufflation of ozone gas can be the answer to your pet's chronic ear problems.....something many dogs suffer from. Young

Budweiser getting his ozone treatment for chronic ear problems.

kittens or cats with herpes virus in their eyes would benefit from a saline flush that has been ozonated. These cats often grow up with chronic watery eyes, eye discharge and often respiratory problems. Simply flushing the eyes with ozonated saline will kill the herpes virus on contact.

Ozone is, in fact, the most potent sterilizer on the planet. My staff and I have to use specially made syringes, tubing and equipment when handling ozone because it will break down and disintegrate regular tubing, syringes and gloves. Ozone, referred to as O³, is a molecule that consists of three oxygen atoms all sharing the same electrons. This makes it a very unstable molecule. This makes it a very powerful molecule but only for a short time. O³ breaks down to O², the stable oxygen we breathe, within hours. This means that we produce our ozone specifically for your pet at the time of his/her treatment.

I hope this article encourages pet owners to consider ozone therapy as part of their pet's treatment plan when they are ill. We'd be happy to answer any questions you may have.

ANIMAL WELLNESS CENTER
Holistic Pet Care

NOW AVAILABLE
State of the Art Ozone Therapy!

• Ozone Therapies	• Pain Management
• Prolozone Injections	• Vaccine Titer Testing
• Acupuncture	• Electroacupuncture
